

# Speaking Engagements

## Industry Talks

Camphora's brilliant flora and fauna experts understand the complex relationship between Singapore's ecosystems and the built human environment. Through industry talks, our staff will share this knowledge with your **business, NGO or educational institution** and offer possible solutions to your current environmental concerns.

## Topics:

- Why use science to make an argument for wildlife protection?
- What does the 6th mass extinction mean for Singapore's wildlife?
- Strategies for habitat enhancement
- What does a 'City in Nature' mean for our future?

## Formats that fit your interests

Camphora staff will work with your organization to create bespoke speaking engagements- whether that involves assembling a panel to hear from multiple perspectives, or answering your most burning environmental questions!

# Specialist Talks

Our seasoned biologists are experts on different groups of wildlife and environmental issues around Singapore. Through our specialist talks, you can learn about any of the following topics:

## Sheryl marine biology

Click and collect: How online shopping has impacted our marine species.

## Sherry botany

Stings, food and poop: How plants and animals interact with each other

## Ruisheng insects

Mathematics and the movement of wildlife

## Isabelle mammals

Camera traps: The secret lives of elusive animals

## Veron marine biology

Underwater invaders on Singapore's coast

## Joys mammals

What roadkill data tells us about Singapore's frogs and snakes

## Clarice birds

The secret lives of Singapore's shorebirds

## Zi Han herpetofauna

Slimy or scaly? Debunking the myths around reptiles

## Ying Ying botany

Before flowers there were ferns: Uncovering the unique evolutionary traits of ferns

## Zaleha botany

How stories about plants provide clues to our past

# Hand's On Workshops

For those that are eager to reconnect with nature, Camphora offers hand's on workshops covering topics that are not commonly taught in Singapore. These workshops are ideal for lunch time relaxation in the office or a nearby park, or for students looking to build their practical skillsets in wildlife conservation.

## Workshops:

- Nature Journaling
- Sketching Wildlife and Landscapes
- Botanical Photography
- Plant Pressing and Identification
- Wildlife Identification
- Intro to GIS for Analyzing Habitats
- How to Set Up Camera Traps
- Statistics for Ecology
- Introduction to Field Survey Methods
  - Mist netting for birds
  - Seine netting for fish
  - Light trapping for moths
  - ...and many more!
